

MAKI[®]

NON-TOXIC RODENT MONITORING BAIT

LONG LASTING MONITORING BLOCK

- Highly weather and mould resistant
- Maximum bait protection from non-target animals (slugs, snails, insects...)
- 20g wrapped block with no active ingredient

BEST USED

- **Commercial premises / Audited sites** (eg food processing factories)
 - Unique wrapped block without active ingredient for rodent monitoring
 - No risk of cross contamination or poisoning
 - Bait stations remain clean until rodent consumption starts
- **Increased longevity**
 - Plastic sachet protects bait from non-target such as insects or slugs
 - Plastic sachet offers protection from humidity and reduce risk of melting
- **Rodent monitoring:**
 - Baits are less likely to be damaged by insects or slugs therefore helping in reporting real rodent consumption
 - Rodents attack patterns are easily identified
 - Mice perforate the plastic through multiple small holes
 - Rats tend to consume the bait through a single large hole
 - No dye colour added to the monitoring bait - rodent faeces keep their natural aspect.

Rats tend to do a single hole relatively large to access the monitoring bait

Mice tend to do multiple holes relatively small to access the monitoring bait
