

CROP RECOMMENDATIONS

MAIZE, VEGETABLES AND OTHER CROPS -

Rate: 20-30 kg/ha

COTTON, WHEAT, BARLEY AND OTHER CEREALS -

Rate: 20 kg/ha

SOYBEAN - Rate: 10 kg/ha

Timing: Placement in the furrow with the seeds. Applied with micro granule applicator.

TPP (TECHNOLOGY PHOSPHORUS PRESERVATION)

Technology Phosphorus Preservation is a new generation of co-formulants for Agronutrition phosphate-based micro-granule fertilisers which improve the bioavailability of phosphorus.

PHOSPHORUS PRESERVATION TECHNOLOGY

PRODUCT SPECIFICATIONS

Uniform micro granules provide multiple contact points with the seed providing emerging seedlings with vital nutrition elements for an optimum start. AGROSPEED Multi is an essential part of the new season fertiliser program. It improves the efficiency of fertiliser use, and limits leaching losses improving yield.

AGROSPEED Multi is specially designed to be used with all micro granule application equipment currently set up on seeders. It offers extremely accurate fertiliser placement at the time of planting. AGROSPEED Multi allows to reduce the quantities of fertiliser used and simplifies logistics.

ROLE OF NUTRIENTS

AGROSPEED Multi associates Nitrogen and Phosphorus and micro-nutrients under perfectly assimilable forms. This mineral balance acts directly on the growth and the vegetative development.

AGROSPEED Multi covers the needs in Zinc of the most demanding crops. Hardly mobile in the soil, Phosphorus is difficult to access by the roots of the seedling. The close placement of P and Zn to the roots greatly increases the uptake of those two elements.

FEATURES AND BENEFITS OF THE FORMULATION

The specific formulation of this product guarantees a very strong assimilation of the nutrition elements by the soil solution guaranteeing a better availability for the roots.

This product is formulated with rigorously selected raw materials, guaranteed by quality control, to ensure a perfect safety of use and to optimise the absorption through the soil.
