

The best performing pod-sealant formulation on the market!

UP TO 12 WEEKS PROTECTION FROM DATE OF APPLICATION

Results from three trials conducted against key competitor products on the market showed on average Mesh performed better in all areas.

- › Trial results from 2023 in Canola
- › Mesh and competitor product used with 100L water/ha
- › Treatments applied at GS 80-82 (beginning of ripening with just 10-20% pods ripe)

	ROI against Untreated
Mesh 1L/ha	\$177
Competitor	\$132

How does Mesh efficacy compare to other formulations?

15 ml and 25 ml of each product was measured out into a petri dish and allowed to evaporate over three days. The resulting dry residue of each was either formed into a ball or the rough rectangular tube shape as shown.

The results clearly show the quantitative differences in dry weight as well as the integrity of the polymer.

Much greater volume/ no cracking

Clear evidence of poor integrity/cracking
